Hiring Manager
Four Winds Technology Group
6151 Lake Osprey Dr, Suite 365
Sarasota, FL 34240

Dear Hiring Manager,

I am applying for the Network Engineer Intern position at Four Winds Technology Group. I am pursuing a Bachelor of Science in Computer Science at the University of South Florida's Tampa campus, with a 3.75 cumulative GPA and expected graduation in May 2027. Your emphasis on engineering mentorship and developing interns into full-time team members appeals to me as I work to expand my networking skills through practical experience.

Through Artemis, my personal AI voice assistant project, I set up Raspberry Pi and ESP32 hardware and configure authenticated MQTT access for local sensor monitoring. I automate broker provisioning and service startup to make setup processes repeatable. Organizing technical documentation for account management, device configuration, and troubleshooting has taught me to write procedures that are clear enough to follow and verify. I have also built an 18-prompt benchmark for evaluating local models, experience I would apply when helping your engineers evaluate new tools and applications.

My Software Engineering coursework and work on InCollege have taught me to translate requirements into testable behavior within a five-person Scrum team. Trustworthy Infrastructure coursework has reinforced the importance of access boundaries, which I apply through least-privilege MQTT permissions. Algorithms coursework has strengthened how I break down problems and assess alternative solutions. After project updates, I run regression checks to catch broken functionality and am developing unit and integration tests to automate verification, a detail-oriented approach I would bring to equipment preparation and system changes.

I would welcome an interview to discuss how my hardware setup, documentation, and automation experience could support your engineers while I learn your client environments. Please contact me at rafael.velecela04@gmail.com or (727) 623-3083. Thank you for your time and consideration.

Sincerely,
Rafael Velecela
